

**State Median Wages and Unemployment Rates**  
**Prepared by the Joint Economic Committee, May 2008**

The nation has seen lackluster wage growth over the economic recovery of the 2000s. Between 2000 and 2007, across the nation inflation-adjusted wages grew by just 0.3 percent per year, while workers' productivity of 2.5 percent per year. As shown below, fourteen states have seen falling wages over that time period.<sup>1</sup> Now, the economic downturn is causing unemployment to rise. Many states are already experiencing recessionary levels of unemployment: the unemployment rate in Michigan, Alaska, California, Rhode Island, and the District of Columbia is already above 6.0 percent.

<sup>i</sup> Fourteen states had inflation-adjusted median wages that were lower in 2007 than they were in 2000. However, only eleven states register negative average annual growth rates due to rounding.
